## Mastercraft XStar 22 (2006)

Ubicada en Chapala, Jalisco. At first glance it is glaringly apparent that the X-Star's bow and hull shape are very out of the ordinary. The bow tapers to two points rather than a single point, giving it a hammerhead shape that dramatically increases the bow's occupancy and makes it accessible from the front. Dramatic changes in the boat's hull design are also apparent at the stern. Four terraced chines on the X-Star's AP-1 (Anything's Possible) hull chisel and shape the wake. The X-Star has a liner ballast system as opposed to conventional storage compartment ballast tanks. Three tanks are located beneath the floor. Topped off, the X-Star can hold 850 lbs of water weight and 500 lbs of octane, transforming beginner wakes into Grade-A tsunamis at the push of a button.

**Eslora:**22ft

**Manga:**8.4ft
